

VANGUARD Swine Nursery

Nursery Starters

The transition from nursing to consuming dry feed is one of the most stressful periods in a pig's life. Getting isowean piglets to start consuming feed as soon as possible is the key to health and performance for the whole feeding period. Form-A-Feed's nursery starters are highly palatable, nutrient dense, pelleted, complete feeds which are proven to provide nursery pigs with the proper nutrition required for fast and efficient gains.

Safe Choice Denagard + CTC (12446-212)

Safe Choice is a first-stage pellet designed for transitioning young pigs to dry feed. Safe Choice is the right choice when you are looking for a starter product with the benefits of immunoglobulins (IgG) without the risk of feeding rendering derived animal by-products. Safe Choice provides steamed rolled oats, dried whey, organic acids, selected microbials, yeast, organic trace minerals, and specific IgG's to provide proper nutrition in one of the most stressful times in a pig's life. Also available in a non-medicated form.

Vanguard Pellet 2 (VP-2, 12465-212) and Vanguard Pellet 3 (VP-3, 12732-912)

VP-2 is designed to be fed to pigs weighing from 12 to 15 pounds while VP-3 should be fed to pigs weighing from 14 to 20 pounds. Both VP-2 and VP-3 provide organic trace minerals, organic acids, natural gut modifiers, porcine peptides, selected microbials, and yeast.

Vanguard Pig Starter MX (11556-912)

Pig-Starter MX is a pellet for pigs weighing from 20 to 50 pounds. Pig Starter MX provides added phytase, multiple organic acids and natural gut modifiers to meet the demands of today's swine genetics.

Nursery Grind-N-Mix Basemixes

Looking for a nursery basemix rather than a complete pelleted starter? Whether you are looking to take advantage of more on-farm commodities or simply prefer meal feeding over pellets, Form-A-Feed's nursery basemixes are your solution to provide nursery pigs with the proper nutrition required for fast and efficient gains.

Vanguard Starter Base (13391-142) and Vanguard Transition (13393-142)

When blended with corn and soybean meal, Vanguard Starter Base and Vanguard Transition combine to form a complete nursery feeding program. Vanguard Starter Base is designed to be fed to young pigs from weaning until 25 pounds of bodyweight while Vanguard Transition should be fed from 25 to 50 pounds of bodyweight. Both products provide organic trace minerals, organic acids, natural gut modifiers, selected microbials and yeast.

Starter Crumble 1300 (13820-442) and Starter Crumble 1000 (13325-442)

Designed for starting young pigs on dry feed from weaning to 5 weeks of age. Provides organic trace minerals, organic acids, processed soy proteins, selected microbials and yeast to meet the demands of today's swine genetics.

VANGUARD Swine Nursery

Nursery Micros

Form-A-Feed's swine nursery micros are low inclusion level (5-10 lbs. per ton) vitamin-trace mineral packs designed to complement a complete nursery feeding program. These micros should be blended with starter bases, grains, oil seed meals, grain by-products, salt, calcium, phosphorus, and amino acids to form complete nursery diets. Several options are available to fit your unique production scenario.

Sow-Starter 10 P VTM (12003-192)

This micro provides methionine, organic trace minerals, vitamins, and phytase.

Sow-Starter 10 PT VTM (12010-192)

This micro provides tryptophan, organic trace minerals, vitamins, and phytase. The addition of tryptophan allows for a reduction in soybean meal usage, and lowers diet cost when soybean meal prices are high.

Nursery T.E.N. Products

Form-A-Feed's Timed Event Nutrition (TEN) products provide swine producers solutions to prevent and overcome nutritional and health challenges. These products are specifically designed for the most stressful and critical periods in the production cycle. Target feeding during these periods improves performance and maximizes a producer's return on investment.

Intensive Care Formula (10619-173)

Intensive Care Formula is designed to improve the transition of young, lightweight, fallen behind, or orphan pigs to dry feed. This product provides milk proteins, cooked cereals, enzymes, acidifiers, sugars, and flavors that are both highly palatable and digestible for young pigs. Intensive Care Formula is designed to be fed as a top-dress to other starter feeds or mixed in a gruel feeder. A better transition to dry feed will improve consistency in a group and ensure a greater number of full-value pigs.

VilliPro (10044-172)

VilliPro provides a proprietary natural blend of essential oils and encapsulated organic acids. This combination aids in the suppression of pathogen growth in the intestinal tract. In addition, Villipro provides the preferential energy source used by the intestinal epithelial cells. This supports intestinal cell growth and provides more cell surface area for nutrient absorption. With a highly functional and healthy gut, performance and profitability can be maximized.

Liberate (15354-172)

Liberate is designed to be fed to nursery pigs enhance feed utilization and improve feed conversion rates. This proprietary blend of enzymes and antioxidants releases additional energy from feed ingredients and eases the transition to a corn-soy based diet. By enhancing the digestibility of amino acids, as well as simple and complex carbohydrates, more of these vital nutrients are liberated from feed ingredients resulting in improved performance and profitability.

Trigger WS (11874-185)

Trigger WS is a unique blend of water soluble organic acids and essential oils. In combination, these components work to reduce the pathogen load in the lower GI through different modes of action. The result is a synergistic effect which is greater than the sum of the two parts. Additionally, Trigger WS contains fructooligosaccharides (FOS) to promote the colonization and proliferation of beneficial bacteria in the lower GI.
