

VANGUARD Swine Grow-Finish

Grow-Finish Premixes

Form-A-Feed's swine grow-finish premixes are moderate inclusion level products (25-60 lbs. per ton) designed to be mixed on-farm with grains, oil seed meals, and grain by-products. Several options are available to fit your unique production scenario.

Swine Grow-Finish Premix (10552-132)

Designed for swine growing and finishing diets when added to soybean meal and grain. This product provides macro minerals, trace minerals, salt, selenium, vitamins, lysine and phytase.

Grow-Finish Amino Acid Premix (15153-132)

Designed for swine growing and finishing diets when added to soybean meal and grain. This product provides macro minerals, trace minerals, salt, lysine, methionine, threonine, tryptophan, phytase, selenium and vitamins.

DDGS Grow-Finish Premix (12244-132)

Designed for swine growing and finishing diets when added to soybean meal, dried distiller's grains and grain. This product provides macro minerals, trace minerals, salt, phytase, selenium and vitamins.

Grow-Finish DDGS Amino Acid Premix (12647-132)

Designed for swine growing and finishing diets when added to soybean meal, dried distiller's grains and grain. This product provides macro minerals, trace minerals, salt, lysine, methionine, threonine, tryptophan, antioxidants, chelated trace minerals, phytase, selenium and vitamins.

Grow-Finish Micros

Form-A-Feed's swine grow-finish micros are low inclusion level products (3-6 lbs. per ton) designed to be blended in a feed mill with grains, oil seed meals, grain by-products, salt, calcium, phosphorus, and amino acids. Several options are available to fit your unique production scenario.

Grow-Finish 5 VTM with Phytase (12004-192)

This micro provides trace minerals, vitamins and phytase.

Gro Plex 5 VTM (11223-192)

This micro provides trace minerals, vitamins and phytase. Additionally, Gro Plex contains the same proprietary blend of essential oils and organic acids found in VilliPro (see back).

Grow-Finish 5 VTM with Phytase and Tryptophan (10631-192)

This product provides trace minerals, vitamins, phytase, and tryptophan. The addition of tryptophan allows for a reduction in soybean meal usage, and lowers diet cost when soybean meal prices are high.

VANGUARD Swine Grow-Finish

Swine Grow-Finish T.E.N. Products

Form-A-Feed's Timed Event Nutrition (TEN) products provide swine producers solutions to prevent and overcome nutritional and health challenges. These products are specifically designed for the most stressful and critical periods in the production cycle. Target feeding during these periods improves performance and maximizes a producer's return on investment.

Capture (10209-172)

Capture is specifically formulated to provide the essential nutrients, electrolytes and sugars necessary for market hogs to maintain body fluid balance. Capture is designed to be fed to market hogs 1-4 weeks prior to marketing when hogs tend to be under significant stress due to pen space limitations, heat, sorting, and transportation. Capture is the all-natural solution to improve gain and conversion efficiency at the end of the feeding period. Additionally, this comes without a detriment to animal handling along with reduced transportation shrink and improved carcass yield. Capture is truly a one-of-a-kind product for hog marketing management.

VilliPro (10044-172)

VilliPro provides a proprietary natural blend of essential oils and encapsulated organic acids. This combination aids in the suppression of pathogen growth in the intestinal tract. In addition, Villipro provides the preferential energy source used by the intestinal epithelial cells. This supports intestinal cell growth and provides more cell surface area for nutrient absorption. With a highly functional and healthy gut, performance and profitability can be maximized.

Liberate (15354-172)

Liberate is designed to be fed to grow/finish pigs to enhance feed utilization and improve feed conversion rates. This proprietary blend of enzymes and antioxidants releases additional energy from feed ingredients. By enhancing the digestibility of amino acids, as well as simple and complex carbohydrates, more of these vital nutrients are liberated from feed ingredients resulting in improved performance and profitability.

Trigger WS (11874-185)

Trigger WS is a unique blend of water soluble organic acids and essential oils. In combination, these components work to reduce the pathogen load in the lower GI through different modes of action. The result is a synergistic effect which is greater than the sum of the two parts. Additionally, Trigger WS contains fructooligosaccharides (FOS) to promote the colonization and proliferation of beneficial bacteria in the lower GI.
