

VANGUARD Sow Herd

Sow Premixes

VANGUARD Sow Premixes are designed to be blended with grain and soybean meal to make complete diets for sows in gestation and lactation. These products are formulated to provide a balanced profile of the vital nutrients needed for longevity and performance demanded from your sow herd.

Gestation & Lactation Sow Premix (10075-132)

Designed to be blended with grain and soybean meal to make complete diets for sows in gestation and lactation. Provides a dense formulation of macro and trace minerals, lysine, choline chloride, selenium yeast, vitamins, and phytase.

Enviro Sow Premix (11173-133)

Designed to be blended with grain and soybean meal to make complete diets for sows in gestation and lactation. This product provides a dense formulation of macro and trace minerals, choline chloride, selenium yeast, organic trace minerals, vitamins, lysine, threonine, and phytase.

Sow Premix 100 (12543-132)

Designed for sows and gilts, gestation and lactation, using soybean meal and grain. Provides macro and organic trace minerals, lysine, threonine, methionine, phytase, vitamins, choline chloride, chromium, and carnitine to meet the demands of today's prolific genetic lines.

Sow Micros

Form-A-Feed's swine sow micros are low inclusion level (5-10 lbs. per ton) vitamin-trace mineral packs designed to complement a complete sow feeding program. These micros should be blended with grains, oil seed meals, grain by-products, salt, calcium, phosphorus, and amino acids to form complete gestation and lactation diets. Several options are available to fit your unique production scenario. All of Form-A-Feed's swine sow micros are formulated to meet the demands of today's high lean and productive genetics.

Sow-Starter 10 P VTM (12003-192)

This product provides methionine, organic trace minerals, vitamins, and phytase.

Sow-Starter 10 PT VTM (12010-192)

This product provides tryptophan, organic trace minerals, vitamins, and phytase. The addition of tryptophan allows for a reduction in soybean meal usage, and lowers diet cost when soybean meal prices are high.

VANGUARD Sow Herd

Sow T.E.N. Products

Form-A-Feed's Timed Event Nutrition (TEN) products provide swine producers solutions to prevent and overcome nutritional and health challenges. These products are specifically designed for the most stressful and critical periods in the production cycle. Target feeding during these periods improves performance and maximizes a producer's return on investment.

Hydro-Wean (14063-472)

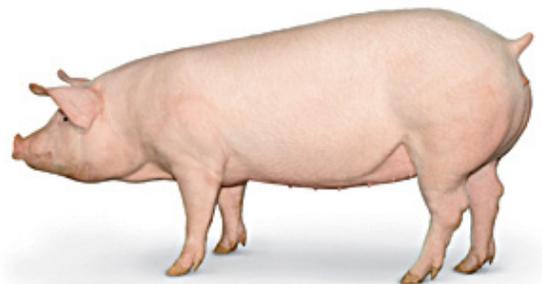

Hydro-Wean is specifically formulated to provide the essential nutrients, electrolytes and sugars necessary to maintain body fluid balance during farrowing, lactation, and other times of stress. Feeding Hydro-Wean pre- and post- farrowing has been shown to increase lactating sow performance. This results in lower pre-weaning mortality, increased weaning weight, and an overall increase in pounds weaned per female.

Sow Lax Pack (15354-172)

Sow Lax Pack is designed to be fed to sows or gilts prior to farrowing and through lactation. This product provides yeast culture, buffers, direct-fed microbials, laxatives, and flavors to stimulate intake and help maintain softer stool consistency. Sow Lax Pack should be offered in the diet 3 weeks prior to farrowing and fed through farrowing.

App-A-Tite (75241-172) and App-A-Tite Concentrate (73860-172)

App-A-Tite is designed for use with out-of-condition grains and/or by-products when molds and mycotoxins are a concern. When mixed into complete rations, App-A-Tite provides a unique blend of flow agents, antioxidants and thiamine to minimize productivity losses associated with these detrimental compounds. For greater application flexibility, App-A-Tite concentrate can be added to complete feeds at a lower inclusion rate.
